

Technology Advisory, Security and Compliance Services

Managed Firewall and UTM

An all inclusive security firewall is essential to deliver visibility into regulatory compliance standards, allowing strict access controls and data leakage audits.

Security Operation Center 24x7 Monitoring

Around the clock monitoring of your organizations' assets allows for faster reporting on how an attack is being directed, by whom and what resources are at risk.

Managed SIEM Services

Our security information and event management services offer real-time analysis of security alerts generated by all of your applications and network hardware.

Managed Incident Response

Rely on an emergency response team that is available to provide on-site and remote investigation of incidents, mitigating the impact of attacks and restoring business.

Managed Vulnerability Assessment

Continuously identifying, quantifying and prioritizing vulnerabilities in your IT infrastructure ensures that all resources meet or exceed risk tolerance standards.

Managed Detection & Response Services

Identification and response services provide control and protocols for managing any form of intrusion or cyber security breach to your endpoint system.

Managed Penetration Testing

Systematically testing system weaknesses reduces the risk and impact of a potential threat. These are especially important in implementing mitigation strategies against attacks.

Managed Compliance Policy Services

Our managed compliance policy services will walk you through the process of creating a flexible, sustainable and effective risk and compliance program.

Managed Network Services

RSI provides 24/7 network and IT infrastructure monitoring. A full suite of services considerably minimizes equipment downtime and alerts are automatically generated to prevent any interruption in business.

Managed Endpoint Security

RSI provides world-class service to ensure that all the devices connected to your network are deployed with your latest risk management policy, offering comprehensive coverage against a vast spectrum of threats.

Forensic Services for IT Security Breaches

With RSI's complete suite of Data Forensics and Incident Response (DFIR) services, clients can rest assured that we can respond with specialized security incident knowledge.

Identification

Identification services provide control and protocols for managing cyber security. At RSI Security, we have management tools that capture, track, and compare a client's cyber- security asset inventory with their risk tolerance for clients of any size (Tier 1-4).

Protection

RSI offers many IT services that range from simple IT helpdesk support to cyber security and forensics. We understand the importance of setting up an end users' IT network with the adequate security measures and software that will provide them with the highest level of protection for their individual IT setup.

Detection

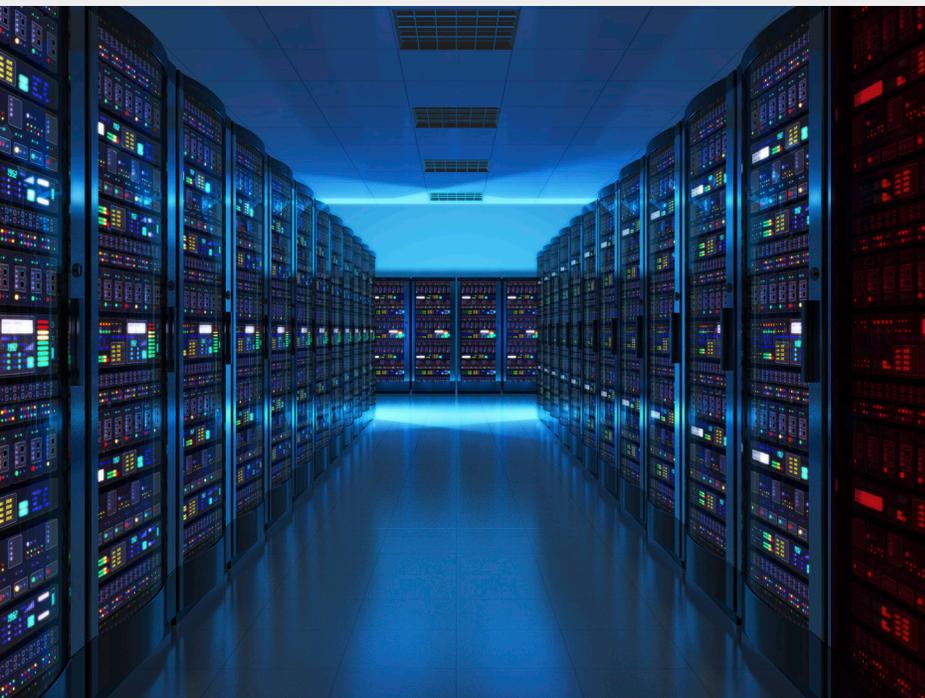

In the event that an RSI Security client experiences any form of an intrusion or breach to their endpoint system, we have the ability to detect any adverse or negative cybersecurity events, determine if our protective solutions have successfully mitigated the matter, and notify the client.

Response & Recovery

In the confirmed event that a RSI Security client has experienced a security breach, we can and will support and advise them through the Incident Response lifecycle. If the breach is complex, and requires additional services (AD Hoc services), RSI Security will provide the client with our base support and guidance services and provide the client with an IRP (Incident Response Plan).

About RSI Security

RSI Security is the nation's premier cybersecurity and compliance provider dedicated to helping organizations achieve risk-management success. We work with some of the world's leading companies, institution and governments to ensure the safety of their information and their compliance with applicable regulation. We also are a security and compliance software ISV and stay at the forefront of innovative tools to save assessment time, increase compliance and provide additional safeguard assurance. With a unique blend of software based automation and managed services, we can assist all sizes of organizations in manag-ing IT governance, risk management and compliance efforts (GRC).
