Cybersecurity Technical Writing

An important aspect of achieving compliance with cybersecurity frameworks is developing and maintaining a library of policies and procedures that meet documentation requirements.

RSI Security has a team of talented, experienced technical writers to evaluate existing documentation and determine what is needed to achieve full compliance. A technical writer will collaborate closely with the client team to collect the data needed to accurately document all required policies

Technical Writing — Additional Services

As your network is documented and recommendations are made for new tools and technologies to remediate system vulnerabilities, an RSI Technical Writer can assist with:

- Developing User and Instruction Guides to ensure appropriate installation, use, and maintenance.
- Security Awareness and other training materials can also be developed to ensure full and effective training for team members, business partners, and vendors.
- Developing workflows, charts, diagrams and online forms as-needed to support all requirements.

RSI Security Technical Writing Services

- Policies and Procedures
- User and Instruction Guides
- Training Materials
- Workflows
- Online Forms
- Charts and Diagrams

Our Step-by-Step Process

RSI uses a step-by-step technical writing process to ensure the highest quality documentation that is accurate and concise:

Develop a List	Research	Gather Data	First Draft	Internal Review	Update	Client Review	Revisions	Finalize & Deliver
Work with an assessor to develop a list of documentation required for compliance.	Research topics and the standard format of required documents.	Gather data from client and assessor. Add client-specific details.	Complete the first draft of documents.	Complete internal QA review of documents.	Update documents with internal review revisions.	Client reviews documents and any additional required client data added.	Update documents with client revisions.	Finalize documents and provide as client deliverables.

About RSI Security

RSI Security is a cybersecurity-focused technology company that helps private and public sector organizations in highly regulated industries to effectively manage risk. RSI Security provides cyber engineering, assessments, advisory services, as well as technical testing to amp up client's security posture while mitigating business risk. Compliance services include PCI DSS, ASV, HIPAA, HITRUST, NIST 800-171, NERC CIP, FISMA, GDPR, CCPA, SOC 2, and more.
