

Forging Partnership for Cybersecurity Success

Effective Cybersecurity requires a team effort. No product or service currently available is able to provide customers with complete protection based on each customer's unique security needs. RSI Security helps companies coordinate various cybersecurity services to expand offerings in compliance, assessment, and advisory consulting through our Strategic Partnership Program.

Building partnerships with other industry vendors forms a foundation for significant business growth, providing an array of best-in-class solutions to protect customers from a wider range of malicious threats, tactics, and techniques—and address all phases of the security life cycle.

HIPAA/HITECH

Healthcare institutions are required by law to safeguard the privacy and integrity of protected health information (PHI) in accordance with the Health Insurance Portability and Accountability Act (HIPAA).

EU GDPR

GDPR regulations require organizations to protect the personally identifiable data of EU citizens, regardless of their place of business. We comprehensively map your data flow and network layout to identify security gaps and opportunities to reduce scope and breach liability.

NIST 800-171

RSI Security assessment and gap analysis services enable Department of Defense (DoD) contractors to identify areas of risk via storage and transmission of Controlled Unclassified Information (CUI), reducing contractor scope and ensuring technical engineering, code, research, and process information are kept secure.

HITRUST

The HITRUST Alliance's CSF framework enables organizations to streamline all of their compliance efforts into a single implementation. HITRUST certification easily maps onto requirements for HIPAA, PCI, NIST SP800-171, and more. RSI Security assists in installing controls and conducting HITRUST bC, i1, and r2 assessments to optimize your compliance.

vCISO

RSI Security offers a virtual, as-needed solution to your Chief Information Security Officer (CISO) role. Our team of experts is on call to advise on program development and deployment, oversee training, and manage routine risk monitoring and compliance implementation, among other necessities—without the burden of recruiting and retaining a full-time C-suite executive.

PCI DSS

Organizations that store, process, or transmit payment card information, such as merchants and service providers, need to comply with the Payment Card Industry (PCI) Data Security Standard (DSS) to protect cardholder data (CHD).

NERC CIP

Energy suppliers and generators are required to comply with NERC's Critical Infrastructure Plan (CIP). It consists of nine standards, which cover secure electronic perimeters, physical security for cyber assets, personnel and training, security management, disaster recovery, and more.

SOC 2

The American Institute of CPAs (AICPA) oversees Service Organization Control (SOC) reporting to ensure data security, availability, processing integrity, confidentiality, and privacy. RSI Security conducts SOC 2 Type 1 and Type 2 reports to fulfill the requirements of your business environment and meet the expectations of your current and potential clientele.

Penetration Testing

RSI Security's advanced penetration tests assess the effectiveness of security controls by simulating a real-world attack that mimics current adversary techniques. This illuminates unknown weaknesses that could result in data being compromised. Having delivered thousands of engagements to hundreds of clients, RSI can spot gaps and anticipate shifts in security trends across our diverse customer base as we act as a seamless extension of your team.

Services

Identification

Identification services provide control and protocols for managing cyber security. At RSI Security, we have management tools that capture, track, and compare a client's cybersecurity asset inventory with their risk tolerance for clients of any size (Tier 1-4).

Response & Recovery

In the event that an RSI Security client has experienced a security breach, RSI will support and advise them through the incident Response lifecycle. If the breach is complex and requires additional (AD Hoc) services, RSI Security will provide the client with our base support and guidance in addition to a customized Incident Response Plan (IRP).

Protection

RSI Security offers IT services that range from simple helpdesk support to cybersecurity and forensics. We understand the importance of setting up end users' IT networks with adequate security measures and software that will provide them with the highest level of protection for their individual IT setups.

Support

RSI Security provides a 24x7 call center, available 365 days a year, which ensures technical support for all base services, as well as questions regarding Ad Hoc and other services.

Detection

In the event that one of RSI Security's clients experiences any form of an intrusion or breach to their endpoint system, we can detect any adverse or negative Cybersecurity events, determine if our protective solutions have successfully mitigated the matter, and notify the client.

Ad Hoc

Ad Hoc services are available to all new and existing clientele. Our engineers will make recommendations and create an action plan based on your needs. All of our services are available on an Ad Hoc basis.

About RSI Security

RSI Security is the nation's premier information security and compliance provider dedicated to helping organizations achieve risk-management success. We work with some of the world's leading companies, institutions, and governmental entities to ensure the safety of their data and their compliance with applicable regulations. We also are a security and compliance software ISV and stay at the forefront of innovative tools to save assessment time, optimize compliance, and provide additional safeguard assurance. With a unique blend of software-based automation and managed services, RSI can assist all sizes of organizations in their IT governance, risk management, and compliance efforts (GRC).
