vCISO

Virtual Chief Information Security Officer Services

Every organization needs a Chief Information Security Officer (CISO) to spearhead cybersecurity and data protection efforts. But not every organization has the bandwidth or resources to find precisely the right CISO on a permanent basis.

That's precisely why RSI Security supports organizations of all shapes and sizes with our Virtual CISO (vCISO) service offering. By working with a vCISO, you'll be able to manage risk, spot vulnerabilities, and get your entire team on the same page in cybersecurity and compliance.

Why You Need a vCISO?

Personalize Security Advisory

A vCISO is more than just outsourced cybersecurity services. It's a dedicated executive-level team that provides personalized advisory services tailored to your technology stack and business processes. You'll be interacting with a group of strategic compliance and cybersecurity professionals at a fraction of the cost of a full-time in-house CISO.
Businesswide Security Awareness

Any company that employs a vCISO gets a team of professionals that provides security awareness for your business. Every good cybersecurity and breach prevention strategy puts awareness and training front and center. A vCISO can help you formulate policies, conduct training, and put cybersecurity and compliance at the forefront of each team member's mind.

Real-Time Incident Response

Having a vCISO helps monitor your systems for cyberattacks and respond swiftly to any threats or breaches should they occur. You'll receive a company-wide breach response plan, along with the executive expertise to help put it into action day after day. If and when a breach does take place, you'll have the expertise at your disposal for all remediation and compliance efforts. A vCISO will also proactively assess for threats to prevent breaches before they occur.

Streamlined Compliance Efforts

No matter what industry-specific regulatory framework applies to your business, compliance should be a year-round effort. A vCISO will help your IT and information security teams with initiatives like documentation and timeline management. With a vCISO, your employees can focus more on doing what they do best and less time stressing about compliance.

Our vCISO Services

SecurityOperations

RSI Security's vCISO will help conduct real-time analysis of potential and immediate security threats, as well as breach response.

Cyber-risk Analysis

We'll help you maintain awareness of developing security threats and assist management in understanding the risks.

Security Architecture

Part of our virtual CISO services is helping you plan and implement critical cybersecurity hardware and software.

Loss Prevention

CISO advisory services will help train and educate internal staff so that data isn't stolen or misused.
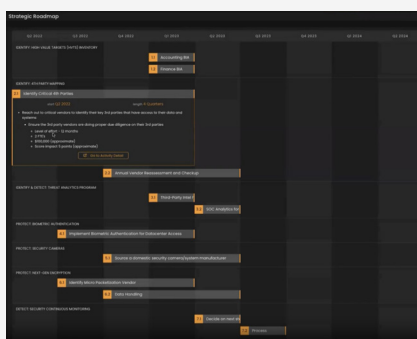

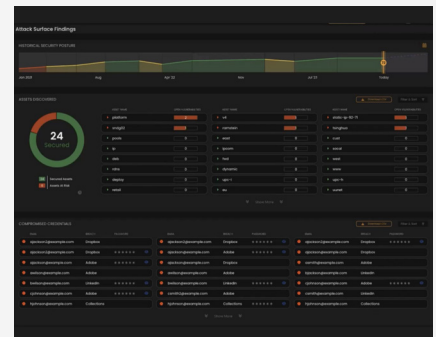

Access Management

CISO consulting services are required to ensure only the right people have access to sensitive systems and data.

Governance And Compliance

RSI Security's vCISO managed services will ensure that your information security operations are up-to-date with all regulatory frameworks.

About RSI Security

RSI Security is the nation's premier information security and compliance provider dedicated to helping organizations achieve risk-management success. We work with some of the world's leading companies, institutions, and governments to ensure their information safety and compliance with the applicable regulations.

We also are a security and compliance software ISV and stay at the forefront of innovative tools to save assessment time, increase compliance, and provide additional safeguard assurance. With a unique blend of software-based automation and managed services, RSI Security can assist all sizes of organizations in managing IT governance, risk management, and compliance efforts (GRC).
