

Managed

Security Services

RSI Security is a full-suite Managed Security Services Provider (MSSP). We offer cyberdefense architecture implementation and management services, including:

Firewall and Web Filtering

Security firewalls set around your perimeter, paired with proactive web filtering, allow you to monitor and control information access.

Security Operation Center

Comprehensive, 24/7 monitoring of all your assets facilitates real-time identification of attack characteristics and response tactics.

Managed SIEM Services

Security information and event monitoring provides visibility and real-time analysis across all assets and systems.

Incident Response

Our emergency response team provides investigations to limit the impact of cyberattacks and facilitate full recovery.

Vulnerability Assessment

Continuous monitoring of internal vulnerabilities and external threats generates risk profiles and corresponding response strategies.

Detection and Response Services

Managed detection and response (MDR) offers both comprehensive monitoring for and response to threats and attacks in real-time.

Penetration Testing

Simulated attacks on your system offer unparalleled insights on how to defend against real cyberthreats.

Compliance Advisory

Our compliance experts will assess gaps and implement the appropriate safeguards for regulatory compliance, helping your organization acquire certifications in the process.

Network Security Services

Full-service network implementation and 24/7 monitoring of cloud and other network infrastructure prevents service interruptions.

Endpoint Security

The inventory and auditing of computers, work stations, smart devices, and all endpoints will ensure comprehensive coverage in accordance with risk management policies.

Forensic Security

Data forensics and incident response offers insights into past attacks and informs proactive safeguards against future threats.

Patch Management

Ongoing patch monitoring targets gaps in your cyberdefenses or compliance integration to facilitate immediate resolution.

RSI Security Cyberdefense Solutions

Identification

Our team will assist with inventory and asset management, capturing all security-relevant data and cross-referencing threat intelligence to identify risk profile and act accordingly.

Detection

Detection services minimize the impact of adverse events. If an attack or breach does occur, it's detected immediately. Response plans are seamlessly initiated and adjusted in real-time.

Protection

RSI Security will assist in all elements of risk and threat protection, including help desk support and backend forensic analysis. We ensure all controls are in place and all users' behavior is safely monitored and controlled.

Response and Recovery

Our dedicated response protocols ensure that an attack or cybersecurity event is stopped as soon as possible. Then, we work to recover functions immediately and restore all client data to its previous condition.

About RSI Security

RSI Security is a full-suite MSSP that has helped enterprise organizations optimize their cyberdefenses for over a decade. We'll help your organization rethink its security with comprehensive managed services. Our governance, risk management, and compliance (GRC) programs also minimize business risk and maximize ROI on cybersecurity spend. Connect with us today to get started.
